Serial group rings of finite groups

Centro de Matemática e Aplicações da Universidade da Beira Interior

Abstract: Serial rings are a natural generalization of semisimple rings. In this talk, we will investigate the question of when the group ring of a finite group over a field of positive characteristic is serial. We will present some results on serial group rings of $p-$solvable and simple groups, and we will also discuss the connection of serial group rings with Brauer trees of finite groups.
